

# Rika Pellet Stoves

## Advantages at a glance

### Natural heat

The heat is distributed through natural convection in the same way as a wood burning stove. An optional ambient air fan can be purchased for those requiring faster heat distribution.

### Extremely quiet

The new, innovative pellet delivery system ensures the operating noises of the Kapo, Filo, Corso, Roco and Miro stoves are extremely minimal. The clicking noise generated by conventional pellet delivery systems has been omitted completely.

### Fully automated operation

The stove's fully automatic operating function allows it to be used extremely easily and with maximum operating comfort. The stove can also be programmed which means you can, for example, set it to switch on automatically on at 5 o'clock in the morning and switch off at 10 o'clock at night.

### Prolonged burning period

Take advantage of a prolonged burning period from just one fill. The time between refills has been extended.

### Removable ash drawer

The removable ash drawer enables the stove to be cleaned easily.

### Remote control

You can conveniently operate your pellet stove from any place and at any time by using the telephone remote control function. You can therefore ensure that your house is warm when you arrive.

### Simple cleaning

The cleaning requirements of your pellet stove are kept to a minimum with the automatic self-cleaning system.

### Low emission values

Thanks to the innovative combustion technology our pellet stoves only produce minimal emissions, which therefore ensures a very low level of environmental impact.

### Solid cast iron doors

The cast iron doors seal tightly and do not distort, even when subjected to high temperatures. This enables the air to circulate optimally in the stove. Maximum combustion efficiency ensures, sooting of the glass is prevented and fuel use is optimized.

# Rika Controls

Automation at the touch of a button

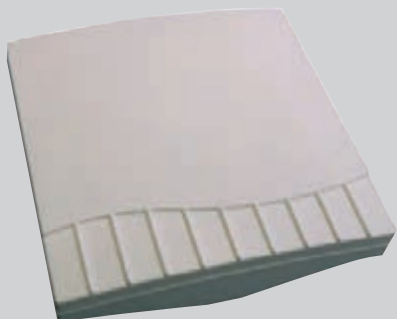

## Convenient control with touch display

Control your stove simply and intuitively with the touch display or with your mobile phone via SMS, the user-friendly interface allows you to have complete control.

## Rika home control

Integrates your pellet stove to an existing Wifi network. Remote control within the home using the WarmApp+

## Rika Room sensor

Available in both a wireless and wired version, the Rika room sensor allows control by thermostat and heating times.

Automatic modulation of the power adjustment includes 5m cable on the wired room sensor.

## Rika warm app

Free App for smartphones and tablets in combination with the Rika Home Control.

iOS compatible

Android compatible

# Rika Kapo

Wood pellet stove

Rika Kapo in silver with black glass

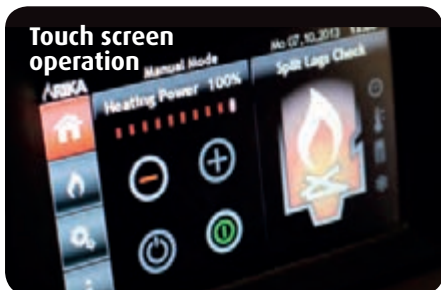

## Design features

- 29 kg pellet hopper.
- Touch screen control
- Optional smart phone control via Rika Warm App
- Ultra quiet auger feed system.
- Choice of contemporary finishes

## Technical

Fuel type	Wood pellet
Smoke control exempt	Pending approval
Nominal heat output	9 kW
Minimum heat output	2.7 kW
Efficiency rating to EN14785	90%
Flue outlet internal diameter	100 mm
Weight	208 kg

## Touch screen operation
