Euroheat axe and hatchet set

Euroheat hickory axes have been designed and crafted for the professional, using the very best in traditional materials and combining cutting edge technology

AXE23S

Vario splitting axe 1.5kg German Line, 750mm shaft
Medium weight splitting axe with wedge-shaped blade
for splitting pre-sawn sections.

AXE06H

Vario hatchet 0.6kg, 450mm shaft
Lightweight hatchet for basic duties such as splitting
firewood and sharpening stakes.

Hickory shaft axe

- **Simplicity**

The new fixing system does away with complex procedures, making it easy to change shafts.

- **Quality**

Steel blades hardened to DIN 7287B and Hickory shafts guarantee maximum reliability and long service life.

- **Safety**

The new fixing system which secures the blade to the shaft prevents uncontrolled loosening of the head.

- **Form**

The entirely new design breaks away from traditional forms – ergonomic, efficient in use and decorative too.

- **Ergonomics**

The ergonomic design ensures great striking force, while the perfect balance of form prevents fatigue and guarantees precision cutting.

Quick-change shafts in
75cm and 90cm lengths

Ergonomic HICKORY
shaft, varnished

Steel axe blade forged and
hardened to DIN 7287

Fixing plate for safety screw fixing
and hexagon socket screws with
spring washer

Euroheat ash vac

The Ash Vac is an extremely convenient tool, used for removing ash from your multifuel stove or fireplace. This large capacity, simple to operate, canister system is used in conjunction with your existing vacuum cleaner.

The Ash Vac uses a simple cyclonic principle to keep the ash in the canister, this means your household vacuum cleaner will remain unaffected by the ash removal process, most importantly it will remain clean.

The motorized model removes the requirement of using your old vacuum as it has a built in vacuum motor.

AC008 Ash Vac 21 litre

AC013 Motorized Ash Vac

Motorized Ash Vac

Make life a little easier

Upgrade your stove with a Remote Control

Many Euroheat stove models now have the option of a remote control unit, which can either be fitted at the time of purchase, or in the future, giving you more flexibility and comfort than ever. The remote is either manually or thermostatically operated.

MS9251

Suitable for
Harmony evolution
Stanford evolution
Stanford SP23 and SP33
Elgar C range.

MS9250

Mains Transformer

Suitable for all Euroheat remote control units.

Perfect burning

The Euroheat moisture meter is the only way to check the moisture of your wood

The moisture content of wood for burning should be as low as possible, but certainly below 25%. This is particularly important if you are burning wood in a smoke exempt area in an approved appliance. In this case the wood should be 20% or less. Wood with a moisture content above this will not burn cleanly or efficiently.

- Burning **dry** wood is environmentally friendly, where as wet wood causes pollution.
- Burning **dry** wood will cost you less money, whereas wet wood reduces the heat available from the wood by up to 80%.
- Burning **dry** wood reduces the maintenance of the stove and substantially increases the longevity of the flue system.
- Burning **dry** wood gives a responsive fire with the finest and most dramatic flame pictures.

Features

- Battery check
- Replaceable pins
- Calibration check
- Auto power off
- Easy to read LCD screen
- Measurement range 6-44%
- Long life battery cr2032 x 3
- Shock resistant housing

AC101 Moisture meter

Season your wood nature's way

The perfect way to store and season your logs

This log store has been designed to encourage nature to naturally dry freshly sawn timber as quickly as possible. Dependent upon type of wood, diameter and length, split or not split, this process can take anywhere between six and twenty-four months.

Dry wood is a must for any type of wood burning. You must either buy pre-dried timber and keep it dry, or season your own. The log store has been designed in a modular fashion, therefore facilitating both types of approach. One log store holds up to 1.5m³ of logs, if you are buying pre-dried timber this may be adequate for your needs. However, if you are naturally seasoning larger quantities just join two or more together side by side or back to back.

Remember burning dry wood will give you efficient, cost effective heating.

Features

- Quick and simple assembly
- Modular construction for space utilization
- Standard felt roof pre-fitted
